EMERSON SIMBILLO

CHAPTER 6 – IN-DEPTH ACTIVITY

_____

1. How many emotions does it recognize? Does it display features? (Take a screen shot of the results)

- 6, but the fear emotion is the hardest one to detect. Yes it display features.

2. Try to make a face for each of the following: sadness, anger, joy, fear, disgust, and surprise. After making a face for each, see how well the app detects the emotion you were expressing. (Take a screen shot of the results)

3. Ask a couple of other people to try it. See whether you can find someone with a beard and ask them to try, too. Does facial hair make it more difficult for the app to recognize an emotion?

- Yes, facial hair makes it more difficult for the app to recognize an emotion

4. What other application areas do you think these kinds of apps could be used for besides advertising?

- For entertainment, and passing time if you are bored.

5. What ethical issues does facial recognition raise? Has the app provided sufficient information as to what it does with the photos taken of people's faces?

- Sometimes the app is not accurate and it is having hard time to detect the right emotion.

6. How well would the recognition software work when used in a more natural setting where the user is not making a face for the camera?

- If I would rate it 1-10, I'll say 6
